

Elegance and brevity - the main characteristics of the new collection of interior doors UniLine.

The elegant sequence of alternating surfaces of imitation wood and glass lines creates an exquisite play of light and shadow. This product will be a highlight in the rooms of modern European or Scandinavian styles, which are characterized by light, thin and elegant details of structures from multi-layered trees, stones and glass.

Technical information

Leaf of the frame construction

Door panel

Laminated leaf/black glass Lacobel/mirror

Double-glazed glass «Lakobel» are absolutely opaque, they have a double float-glass, glued together using polyurethane glue PUR (Germany). This design is characterized by increased strength and moisture resistance, so doors with a similar double-glazed window can be placed in the children's room or in places with high traffic. At the same time, the glasses are light enough and do not weight the overall design of the doors.

In production it is used the method of acid etching, in which all chemicals are neutralized. Finished products are ecologically clean.

Telescopic platband, surface without nails

Surface Ekoshpon DRY SKIN - revolutionary German technology: ecologically clean material, devoided of phenol formaldehyde, noninferior in quality to natural veneer or varnished color, but superioered to their durability, uniformity and form.

Dimensions

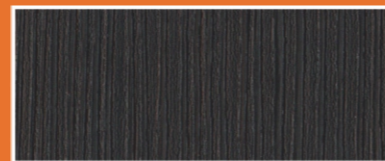

Width 400/600/700/800/900 mm

Height 2000 mm

Thickness 36 mm
